Caché MVBasic Supported Features

The tables in this document list the features of UniVerse Basic and their status in Caché MVBasic. There are two possibilities:

- Present This feature is implemented in Caché MVBasic.
- Caché Alternative Exists The feature is not supported, but much of this functionality is available in other ways in Caché

Rows with neither column checked indicate that the development is still underway. If the word "reserved" appears in a column, it indicates that the term is a reserved word, but is not a statement or function in MultiValue Basic.

- The MVBasic FMT and FMTS functions.
- Implicit formatting with the MVBasic DISPLAY, CRT, and PRINT statements.
- The CMQL query language CONV (or CONVERSION) clause.
- The VOC Attribute 7 value.

For further details and program examples for individual conversion codes, refer to the ICONV and OCONV functions in the *Caché MVBasic Language Reference*.
